# Introduction to Calendar Booking App

Open your browser and go to https://localhost:3000/. Most browsers are supported; however, I recommend using Google Chrome.

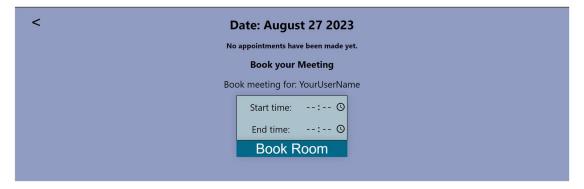

Here you will be prompted to log in with a username. No password or credentials are implemented yet. Make sure you use the same username every time.

This is the first page you will see after logging in. In this example the user logged in as YourUserName. At the bottom of the page, we can see all the bookings that the user has made, currently none. To book a date for your meeting, click the day you wish to book.
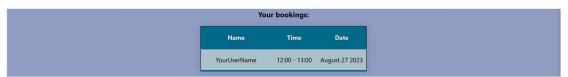

After clicking on a day (August 27 2023 in this example) we can see all the bookings that have already been made, and we can fill in the form at the bottom of the page with our start time and end time to create our own booking.

Same page after booking a meeting from 12:00 to 13:00 on August 27th 2023. On the right side of the table there are two buttons, labeled "Save changes" and one called "Delete". If you wish to edit the time of your booking, you can edit the values in the input fields, and click "Save changes", or delete the booking by pressing "Delete".

When booking, you might encounter errors. These errors tell you that either, you have tried to book after 17.00, before 7.00, meeting is over before it starts, or your meeting overlaps another meeting.

At all times you can click the Arrow at the top left corner to go back to the previous page.

This is now the bottom of the calendar page, and we can see that we have a meeting scheduled.
